

Inverter battery capacity

Overview

Note! The battery size will be based on running your inverter at its full capacity

Assumptions 1. Modified sine wave inverter efficiency: 85% 2. Pure sine wave inverter efficiency: 90% 3. Lithium Battery: 100% Depth of discharge limit 4. lead-acid Battery: 50% Depth of discharge limit Instructions! To calculate the battery capacity for your inverter use this formula $\text{Inverter capacity (W)} \times \text{Runtime (hrs)} / \text{solar system voltage} = \text{Battery Size} \times 1.15$ Multiply the result by 2 for lead-acid type. You would need around 24v 150Ah Lithium or 24v 300Ah Lead-acid Battery to run a 3000-watt inverter for 1 hour at its full capacity Related Posts 1. What Will An Inverter Run & For How Long?
